SUMMARY

Frontend Developer specializing in AI agentic workflows and full product ownership. Recently delivered a solo full-stack platform end-to-end at Makers Digital (Denmark) — owning architecture, implementation, and documentation without supervision. Backed by 12+ years of entrepreneurial leadership and rapid self-directed learning.

Currently seeking a frontend role in a structured engineering environment with clear collaboration and feedback loops.

TECHNICAL SKILLS

Front-End:	React 19, TanStack Start (SSR), TanStack Query, Next.js, Tailwind CSS, shadcn/ui, Framer Motion, React Router, React Hook Form, Redux Toolkit, Zod
Backend / CMS:	Strapi v5, Supabase, Node.js
Concepts:	SSR/SSG, Headless CMS Architecture, Dynamic Routing, RESTful APIs, Programmatic SEO (XML sitemap, JSON-LD, OpenGraph), Authentication & Authorization, Component Architecture, State Management, Error Handling, Responsive Design
Tools:	Git / Git-flow, Google Antigravity, Vercel, Figma, Notion
Languages:	JavaScript (ES6+), TypeScript, HTML, CSS, SQL (basics)

AI AGENTIC DEVELOPMENT (Core Strength)

- Designed and executed a structured **7-step AI agent workflow** (Context → Plan → Execute → Verify → Debug → Close-out → Human Review)
→ enabled fast iteration while maintaining control over output quality
- Built a **modular documentation system** (REQUIREMENTS.md, SYSTEM_DESIGN.md, RULES.md, DECISIONS.md)
→ constrained AI behavior, reduced ambiguity, and kept large tasks organized
- Created a **persistent file-based memory system** (.agent/) including framework learning guides
→ maintained cross-session continuity and accelerated self-teaching of unfamiliar stacks
- Captured real AI failure cases** (e.g., outdated APIs, schema mismatches, unsafe Git actions)
→ codified them into RULES.md and enforced validation before merge to prevent recurrence
- Configured AI agents to surface architectural risks** and explain reasoning before code generation
→ reduced blind execution and improved decision quality during development

WORK EXPERIENCE

Frontend Developer — Makers Digital Denmark – Bangkok branch · Feb 2026 – Mar 2026

Project 1: Novasou — Internal Recruitment Platform

Solo Full-Stack Developer (expanded scope from initial frontend role)

Internal platform connecting Thai developers with Danish companies. Built independently from project init to production-ready submission within ~30 days — while self-teaching TanStack Start without technical guidance.

- Architected frontend in TanStack Start (React 19)** with SSR, type-safe routing, and programmatic SEO (JSON-LD, dynamic sitemaps)
→ eliminated loading states and ensured all dynamic pages are indexable
- Engineered full Strapi v5 backend** with 5 content types, 29 reusable components, and a dynamic page generator (\$slug.tsx + BlockRenderer)
→ allowed content editors to create and publish pages without developer help
- Developed an idempotent TypeScript seed pipeline** using Strapi's documents API
→ enabled clean, repeatable database resets without data drift
- Implemented TanStack Server Functions** for secure operations (e.g., SendGrid integration)
→ kept sensitive credentials server-side, never exposed to client

Stack: React 19 · TanStack Start · Strapi v5 · Tailwind v4 · shadcn/ui · Framer Motion · Zod · SendGrid · Local demo available on request.

Project 2: B2B E-Commerce Platform (Corporate Multi-Role System)

Initial Contribution (2 Weeks)

Two-week solo contribution to an 8-month enterprise platform with multiple user roles and dual backend systems (Strapi + Vendure).

- **Proposed and executed a "Backend-First" architectural pivot** to build a stable Strapi backend before migrating the UI
→ *decoupled frontend progress from unstable UI requirements, allowing development to continue without blockers*
- **Reverse-engineered a 5-role permission system** from an undocumented codebase and shipped Layout/Global Config with a dynamic page builder (8 block types)
→ *enabled content editors to compose pages without engineering involvement*
- **Authored comprehensive handoff documentation** (ROADMAP.md, DEVELOPER_GUIDE.md) capturing coding rules and migration plans
→ *ensured zero-friction continuity for future human developers or AI agents*

EARLIER EXPERIENCE (Pre-Dev)

Business Owner — Rare & Variegated Plant Garden · Jun 2021 – Jun 2022

Online plant business averaging 280,000 THB/month; produced 65+ videos generating 10M+ total views.

Business Owner — Chicken Smoothie Business · Dec 2016 – Dec 2020

Operated an online health-food brand end-to-end (recipe development, sourcing, marketing, fulfillment).

Managing Director — Hybola Co., Ltd · Jun 2011 – Dec 2015

Managed retail across 3 Bangkok malls; pitched custom-branded electronics to corporate clients (UOB, Kasikorn, Fitness First).

EDUCATION & CERTIFICATIONS

- **B.Eng. Information and Communication Engineering** — Chulalongkorn University (Jun 2007 – Jun 2011)
- **The Ultimate React Course 2024: React, Next.js, Redux & More** — Udemy (May – Nov 2024)
- **Full Stack JavaScript For Web Developer** — Codecademy Thailand (Mar – Jul 2023)
